A microscope glass slide is a thin flat piece of glass used to hold objects for examination under a microscope, typically 75 by 26 mm (3 by 1 inches) and about 1 mm thick. Typically, the object is placed or secured ('mounted') on the slide, and then both are inserted together in the microscope for viewing. This arrangement allows several slide-mounted objects to be quickly inserted and removed from the microscope, labeled, transported, and stored in appropriate slide cases or folders.

The global Microscope Glass Slide market size is projected to grow from US\$ 176 million in 2024 to US\$ 230 million in 2030; it is expected to grow at a CAGR of 4.6% from 2024 to 2030.
