Microservers are small equipment that are used in low power microprocessor chips and places where space is a major constraint. Most of the server motherboard functions are integrated on a single microchip, except DRAM, boot FLASH, and power circuits. A microserver Integrated Circuit (IC) consists of thousands or millions of transistors, resistors, or capacitors. To perform calculations, microserver ICs are used as a microprocessors. Transistors in microserver ICs are very small compared to Others ICs and are measured in nanometers. Micro server is a small server appliance that works like a server.

The global Microserver Integrated Circuit (Microserver IC) market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.

With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Microserver Integrated Circuit (Microserver IC).

The global market for semiconductor was estimated at US\$ 579 billion in the year 2022, is projected to US\$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.
