The microsphere forming instrument is an important equipment developed to meet the needs of the IVD industry, scientific research, etc. It points reagents into liquid nitrogen to form and quantify on demand. Send the frozen formed ice balls to the freeze-drying equipment for drying, and then store them in containers. Used in diagnostic reagents, microchips, biomedical treatments, beauty cosmetics, microorganisms, probiotic balls, etc. for humans, animals, and the environment. The lyophilized pellets retain the activity of enzymes/proteins to the maximum extent, can be stored for a long time after sealing, and have a loose network structure and can be quickly reconstituted.

The global Microsphere Forming Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
