Microwave Body Contouring Unit is a medical device used for non-invasive fat reduction and body reshaping. It utilizes microwave energy to target and destroy fat cells in specific areas of the body, such as the abdomen, thighs, or love handles. The procedure involves placing an applicator on the desired area, which emits controlled microwave energy to heat and break down the fat cells. The destroyed fat cells are then naturally eliminated by the body over time. This treatment is typically performed in a clinical setting and is considered safe and effective, providing a potential alternative to surgical methods for body contouring.

The global Microwave Body Contouring Unit market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
