A microwave dielectric resonator is a piece of dielectric (non-conducting but polarizable) material, usually ceramic, in which microwaves are confined inside the resonator material and bounce back and forth between the two sides due to a sudden change in the dielectric constant of the surface. At certain frequencies, resonant frequencies, microwaves form standing waves. In a resonator, it oscillates with a large amplitude. Dielectric resonators typically consist of ceramic 'disks' with a large dielectric constant and low dissipation factor. The resonant frequency is determined by the overall physical size of the resonator and the dielectric constant of the material.

The global market for Microwave Dielectric Resonators is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Microwave Dielectric Resonators market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
