The microwave motion sensor is a microwave moving object detector designed using the principle of Doppler radar. Different from general infrared detectors, microwave sensors detect the movement of objects by detecting microwaves reflected by objects. The detection objects will not be limited to the human body, but also many other things. Microwave sensors are not affected by ambient temperature, have long detection range and high sensitivity. They are widely used in industrial, transportation and civil devices, such as vehicle speed measurement, automatic doors, sensor lights, reversing radar, etc. Due to the universality of microwave sensor detection objects, in actual life applications, another sensor will be used for targeted detection.

United States market for Microwave Motion Sensor is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
