The global Microwave and Ovenable Packaging market size is predicted to grow from US\$ 5058 million in 2025 to US\$ 8696 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

Microwave and Ovenable Packaging refers to food packaging products that maintain structural stability, safety, and non-toxicity during microwave heating, baking, or reheating, while also possessing high-temperature resistance. These primarily include heat-resistant cardboard boxes, coated paper trays, CPET lunch boxes, aluminum foil composite plates, heat-resistant plastic containers, and biodegradable fiber molded packaging. This type of packaging can withstand temperatures from 100° to over 220° while meeting requirements for food contact safety, barrier properties, leak-proofing, and preservation. It is widely used in prepared meals, frozen foods, ready-to-eat meals, baked goods, and airline catering. With the growth of global convenience food consumption, the rapid development of the prepared meal industry, and increasing consumer demand for ready-to-eat products, the market for microwave-safe and oven-safe packaging continues to expand. In recent years, the industry has been moving towards environmental friendliness, lightweight design, and high performance, with recyclable materials, bio-based materials, and fluorine-free coating technologies gradually becoming key research and development areas. In the future, new packaging products that combine high-temperature resistance, environmental friendliness, and intelligent packaging functions will further drive market upgrades and gain wider application in the food delivery, retail, and cold chain food sectors.
