Abstracts

The global Middle Phalanx Model market size is predicted to grow from US$ 24.49 million in 2025 to US$ 35.32 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

In 2024, global Middle Phalanx Model production reached approximately 0.4 M units, with an average global market price of around US$ 30 per unit.A middle phalanx model is an anatomical representation of the middle phalanx of a toe (the intermediate bone segment between the proximal and distal phalanx). This model is typically made of plastic, resin, polyurethane, silicone, or 3D printing materials and can be used as a standalone bone or as part of a complete foot or lower limb skeletal model.

Core Structural Features

Anatomical Accuracy: 3D reconstruction based on CT/MRI data, reproducing the middle phalanx morphology at a 1:1 ratio.

Material Properties: Commonly used are polymer resins, polyurethane, silicone, or 3D-printed composites, some with a bone texture and toughness.

Modular Design: Removable, supports connection to the proximal and distal phalanges.

Transparent and Stained Versions: The transparent version facilitates internal visualization, while the stained version highlights pathology or tendon attachment points.

Functional Enhancements: Some models support joint motion demonstrations or

loading experiments.

Production Capacity

Conventional Model Manufacturers: Annual production of approximately 50,000–150,000 units, primarily targeting the teaching and research markets.

Specialized Manufacturers: Annual production of up to 300,000–500,000 units, reducing costs through digital modeling and mass production, and expanding into medical device companies and rehabilitation institutions.

Growth Drivers: The expansion of medical schools and the improvement of anatomical teaching standardization.

The high incidence of orthopedic diseases (fractures, degenerative lesions) drives training demand.

The increasing popularity of personalized 3D printed models in preoperative planning. The market for rehabilitation medicine and prosthetic design is growing.
