The Middle Temperature ZnO Desulfurizer is a solid adsorbent utilizing zinc oxide (ZnO) as the active component for selective removal of sulfur compounds (e.g., H₂S) from gases at moderate temperatures (200–400 °C). Its desulfurization mechanism relies on chemical reactions between ZnO and sulfur compounds, forming stable zinc sulfide (ZnS) products. The material requires high specific surface area, porosity, and sintering resistance to sustain long-term activity and minimize side reactions (e.g., methanation or coking). Its performance is significantly influenced by temperature, space velocity, and sulfur compound concentration.

United States market for Middle Temperature ZnO Desulfurizer is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
