MIG-MAG welding machine is a commonly used semi-automatic gas shielded welding equipment. MIG-MAG welding machine protects the molten metal weld by using inert gas (such as argon) or active gas (such as carbon dioxide) during the welding process. The welder supplies the required current and voltage to form a stable arc between the welding wire (welding consumables) and the workpiece. The welding wire is automatically fed into the welding area, where it melts and fills the weld seam, creating

a continuous weld.
