According to our LPI (LP Information) latest study, the global Mild-Hybrid Vehicles market size was valued at US\$ million in 2023. With growing demand in downstream market, the Mild-Hybrid Vehicles is forecast to a readjusted size of US\$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Mild-Hybrid Vehicles market. Mild-Hybrid Vehicles are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Mild-Hybrid Vehicles. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Mild-Hybrid Vehicles market.

A mild hybrid car works just like a hybrid vehicle, but the key difference is in its battery. Unlike hybrids which can have the battery alone power the car, and therefore work just like an electric car, a mild hybrid can't. That means you'll always be using your combustion engine alongside the battery.

Due to increasingly stringent energy consumption and emission regulations in Europe, European manufacturers represented by BMW, Mercedes-Benz and Audi have led the promotion of the application and promotion of 48V mild hybrid systems.
