The global Military Antenna market size is predicted to grow from US\$ 4526 million in 2025 to US\$ 6058 million in 2031; it is expected to grow at a CAGR of 5.0% from 2025 to 2031.

An antenna is any device that converts electronic signals to electromagnetic waves (and vice versa) effectively with minimum loss of signals.

Antenna is one of the most vital organ-like ear and eye to any electronic system. It acts as a link for electromagnetic energy between guided medium and free space around. It was at the height of World War II that many antenna foundations were laid, upon which later, engineers were to build a wide variety of antennas. Historically, antenna design and metrology have not achieved the level of recognition they deserve, especially when compared with the glamour of microprocessors, laser technology, computers etc. but antenna engineering is dynamic and a high level of technology field. Since World War II, both radar and electronic warfare technologies have attained an extremely high state of performance. Modern military forces are depending heavily on the antenna design for surveillance, electronic counter measures, navigation, weapon control, communication etc.

Antenna requirements for military applications include low profile, high efficiency, wide frequency band, highly integrated and conformability to the host platform. The low profile and conformality stem from the desire to blend the antenna into its surroundings to avoid easy visible detection and identification. These applications often require novel antenna solutions.

This report studies the Military Antenna market.

Harris is the world leading player in global Military Antennas market with the market share of 13%, in terms of revenue, and followed by Cobham, Alaris Antennas and Antenna Products.
