The global Military Breathable Gas Protective Clothing market size is predicted to grow from US\$ 407 million in 2025 to US\$ 760 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

Military breathable gas protective clothing is a type of personal protective equipment designed for the battlefield and military special mission environments. Its core is to have the ability to block and seal chemical warfare agents and toxic industrial chemicals, while reducing the heat load and humidity caused by long-term wear through composite materials and structural design with air supply ventilation, filtration ventilation, or moisture wicking ability. It also enhances mobility and continuous operation capabilities, and is usually systematically compatible with military gas masks or gas supply systems, communication and carrying equipment. In 2025, global Military Breathable Gas Protective Clothing production reached approximately 6,166 K Units, with an average global market price of around US\$ 73.25 per Unit.

The procurement logic of military breathable gas protective clothing is evolving from simply pursuing the highest barrier to a comprehensive indicator of comfort and system compatibility when the protection spectrum is extended. This is driven by the increase in training and deployment intensity, heat stress risk management under high temperature, high humidity, and high-intensity mobility conditions, as well as the availability improvement of low load and low noise friction brought by new materials. The focus of competition will be on the low permeability and durability of materials, the stability of moisture permeability and heat dissipation performance, the standardization of interfaces with mask filtering and communication helmets and carrying systems, the adaptation of quick on/off and decontamination processes, and the ability to ensure full life cycle cost and scale. Suppliers with material research and development, system

integration, military standard verification, and supply chain resilience are more likely to obtain long-term standardization and bulk orders.
