According to this study, the global Military Laser Weapon System market size will reach US$ 1129 million by 2031.

A military laser weapon system, often simply referred to as a laser weapon or military laser, is a high- energy laser-based device designed for military and defense applications. It utilizes the power of focused and amplified laser beams to engage, damage, disable, or destroy a variety of targets, including vehicles, aircraft, drones, missiles, and other threats. These systems are characterized by their ability to deliver precise, rapid, and concentrated energy on target, making them an emerging technology in modern warfare.

Driving factors

Policy support: Governments of various countries attach great importance to the development of national defense science and technology and weapons and equipment, and have issued a series of policies to support the research and application of laser weapons. For example, China has continuously issued relevant policies. In the past five years, the number of policies related to laser weapons has increased year by year, and the funds used for laser weapon research and development in the national defense budget have also continued to grow.

Military needs: The form of modern warfare continues to evolve. Laser weapons, with their advantages of precise strikes, rapid response, high damage efficiency, and low cost, play an increasingly important role in air defense and anti-missile, precision strikes, battlefield guidance and other fields, and have become the focus of competition for development by the military of various countries.
