The global Military MOSFET market size is predicted to grow from US$ 3236 million in 2025 to US$ 5404 million in 2031; it is expected to grow at a CAGR of 8.9% from 2025 to 2031.

Military MOSFET refers to Metal-Oxide-Semiconductor Field-Effect Transistors (MOSFETs) that are specifically designed, manufactured, and qualified for use in military applications. MOSFETs are semiconductor devices commonly used in electronic circuits to amplify and switch electronic signals. In military applications, MOSFETs play a crucial role in various electronic systems, including communication equipment, radar systems, electronic warfare (EW) systems, and other mission-critical devices.

Increased Demand for Electronic Warfare (EW) Systems: The demand for advanced electronic warfare systems by military organizations around the world has been a significant driver for Military MOSFETs. These systems require high-performance and rugged MOSFETs to operate effectively in contested and dynamic electromagnetic environments.

Space-Based Applications: The use of satellites and space-based technologies for military purposes has grown. Military MOSFETs designed for space applications require radiation-hardened characteristics to withstand the space environment.

Supply Chain Resilience: The military electronics industry has faced supply chain disruptions, prompting a need for more resilient supply chains and domestic manufacturing capabilities for critical components like MOSFETs.
