The global Military Radar Detection Devices market size is predicted to grow from US\$ 2197 million in 2025 to US\$ 3307 million in 2031; it is expected to grow at a CAGR of 7.1% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Military radars may be used to detect a wide range of targets including people, moving vehicles, aircraft and helicopters, and UAVs (unmanned aerial vehicles). They can be highly useful for counter-UAS applications as they may be able to detect drones that are flown very low to the ground to avoid detection by other systems. The radar systems may be able to classify targets based on size and movement patterns, with the ability to distinguish small drones from other objects such as birds.

According to the 2022 global military expenditure statistics report released by the SIPRI, global military spending in 2022 maintained growth for the eighth consecutive year, an increase of 3.7% compared with 2021, reaching \$2.24 trillion. The United States had the largest military expenditure in the world, with a size of \$877 billion, accounting for 39% of the world's total military expenditure. China and Russia were second and third, respectively. Ukraine's defense spending increased by 640% in 2022, making it the 11th largest defense spender in the world. The UK had the highest defence spending in Central and Western Europe at \$68.5 billion. France, South Korea and Japan also rank among the world's top 10 defense spenders.
