The global Military Storage market size is predicted to grow from US\$ 1819 million in 2025 to US\$ 2771 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

In 2025, global Military Storage production reached approximately 387 K units, with an average global market price of around US\$ 4795 per unit.

Military storage refers to storage products and systems designed for applications such as military equipment, command and communication, and aerospace, meeting requirements for high reliability, high security, robust environmental adaptability, and strict military certification standards. Its core components include embedded storage, solid-state storage (SSD), and specialized storage platforms, serving as critical infrastructure for the digitalization and intelligent transformation of national defense.

The digitalization and intelligent equipment upgrades within the defense sector are driving a sustained expansion in demand. Consequently, products are rapidly evolving to incorporate features such as wide-temperature operation, vibration resistance, radiation hardening, hardware encryption, and domestic cryptographic algorithms, as well as integrated storage and computing capabilities. Meanwhile, novel memory technologies such as MRAM and ReRAM are gradually displacing traditional storage solutions. Overall, the sector is transitioning from a focus on isolated components toward the development of highly reliable, secure, systemic, and intelligent battlefield data infrastructure.
