The global Military Titanium Sponge market size is predicted to grow from US\$ 1909 million in 2025 to US\$ 3603 million in 2032; it is expected to grow at a CAGR of 9.7% from 2026 to 2032.

Military titanium sponge is a high-purity porous titanium metal and a primary raw material for producing titanium alloys in the aerospace and defense industries. It possesses excellent strength-to-weight ratio, corrosion resistance, and high-temperature performance, making it widely used in military aircraft, ships, missile systems, armored vehicles, and other advanced defense equipment requiring lightweight, high-performance structural materials. The military titanium sponge industry chain comprises several key links. Upstream mainly covers the supply of basic resources and processes such as titanium ore resources, magnesium reducing agents, titanium chloride raw materials, and metallurgical chemical materials. Midstream involves the smelting and processing of titanium sponge, including core metallurgical processes such as chlorination, reduction, vacuum distillation, and purification separation. Downstream applications are mainly concentrated in aerospace, military equipment, and high-end weapon systems, used to manufacture high-strength titanium alloy structural materials. The industry chain also includes alloy processing, material testing, and recycling services to ensure stable material performance and supply chain security. In 2025, global production of military titanium sponge is projected to reach approximately 247,000 tons, with a global average market price of approximately US\$7,900 per ton. The gross profit margins of major companies in the industry range from 18% to 32%. In 2025, the global production capacity of military-grade sponge titanium is expected to reach approximately 329,000 tons.

The Military Titanium Sponge market is a strategic segment within advanced materials

and defense metallurgy, driven by rising demand for lightweight, high-strength materials in aerospace and military applications. Titanium sponge serves as the foundational raw material for producing titanium alloys used in aircraft, naval systems, missiles, and armored platforms. Market growth is supported by global defense modernization, increased aerospace manufacturing, and technological advancements in metallurgical processes that improve yield efficiency and material quality. However, the industry faces challenges such as high energy consumption, complex production processes, and sensitivity to raw material supply chains. Overall, the market demonstrates stable long-term growth potential, closely linked to defense spending cycles and aerospace industrial development.
