Milk bulk tank is a large storage tank made of stainless steel for collecting milk at cold temperature. It is an important part of dairy farm and milk processing equipment, and is also known as bulk tank or milk cooler. As milk is highly perishable, it has low shelf life of about 2-3 days, and requires primary preservative technique such as pre-cooling and pasteurization to ensure a longer shelf life. This is generally provided by storing it in a bulk tank. A milk bulk tank is used to preserve milk for a long time and prevent microbial contamination. The tank also avoids the risk of deterioration of the milk by preventing contact with extraneous foreign particles such as sand, stone, metal, fruit pits, stalks, and straw. Milk bulk tanks also help processors to inspect the quality of milk through various testing processes.
