In 2024, global Milk plate heat exchangers sales reached approximately 470 k units , with an average global market price of around US$ 2100 per unit. Milk plate heat exchangers are compact heat exchange devices constructed with stacked stainless steel plates, enabling rapid heat transfer between milk and cooling/heating media through interplate channels, widely used in pasteurization, UHT sterilization, and pre-cooling processes. Their advantages include high thermal efficiency, scalability, and easy disassembly for cleaning, meeting dual requirements of hygiene and energy efficiency in the dairy industry. The upstream supply chain relies on precision stainless steel plates, sealing gaskets, and food-grade coating suppliers; the midstream involves stamping, laser welding, pressure testing, and sanitary certifications; downstream integration targets dairy processing lines, beverage production systems, and complete sterilization equipment, requiring compatibility with automated control systems and CIP cleaning processes.
