In 2024, global Milk pre-coolers sales reached approximately 670 k units , with an average global market price of around US$ 1700 per unit. Milk pre-coolers are specialized rapid cooling equipment for dairy farms or processing plants, using plate or tubular heat exchangers to quickly reduce freshly milked temperature (?35°C) to below 4°C, inhibiting bacterial growth and preserving milk quality. The technical core lies in efficient heat transfer medium (e.g., ice water or glycol solution) circulation control and sanitary material applications. The upstream supply chain encompasses food-grade stainless steel, heat exchange plates, pumps/valves, and temperature control components; the midstream focuses on sanitary manufacturing, system assembly, and microbial prevention design; downstream services directly serve dairy farms, milk processing plants, and milk tanker manufacturers, requiring compliance with food safety regulations and clean-in-place (CIP) protocols.
