The global Milk Preservative market size is predicted to grow from US\$ 325 million in 2025 to US\$ 501 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

Milk preservatives refer to a collective term for substances or technologies used to delay or inhibit the growth of microorganisms in milk and dairy products, prevent spoilage, and extend shelf life. From a regulatory and industry practice perspective, synthetic chemical preservatives are generally not permitted in liquid pure milk; its preservation primarily relies on processes such as pasteurization, ultra-high temperature (UHT) sterilization, aseptic filling, and low-temperature cold chain preservation. Only in some dairy beverages or formulated dairy products can small amounts of food-grade preservatives (such as sorbates) be used within the limits allowed by regulations. Therefore, milk preservation is essentially based on process-based preservation and physical antibacterial methods, rather than solely relying on chemical additives.

The upstream of the milk preservative industry chain mainly includes the production and supply of food-grade preservative raw materials and bioactive components, such as organic acids and their salts (sorbates, benzoates), natural antibacterial components (lactoferrin, nisin), and related chemical and bio-fermentation raw materials. The midstream involves the provision of preservative preparation and preservation technologies, encompassing food additive manufacturers, biological preservative formulation companies, and providers of process solutions focused on sterilization and bacteriostasis. Downstream applications are concentrated in dairy beverage, flavored milk, functional milk, and some compound dairy product manufacturers, extending to supporting industries such as cold chain logistics, aseptic packaging, and food safety testing. In the pure liquid milk sector, process preservation is mainly relied upon rather than chemical preservative additions, with demand for the industry chain primarily

driven by technology and equipment.

In 2025, the average price of milk preservatives was \$4,000/ton, with sales of 83,000 tons, total production capacity of 117,000 tons, and a gross profit margin of approximately 31%.
