The global Millimeter Wave AiP Module market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The millimeter-wave AiP module is an integrated module of high-frequency communication technology, usually used in wireless communication equipment and radio frequency (RF) systems.

AiP is the first choice for the current 5G millimeter wave mobile phone antenna packaging solution. The current main antenna integration solutions are AoC and AiP. The AoC solution is to integrate the antenna and other circuits on the same chip, which has a high degree of integration, but the cost is relatively high; AiP The solution is to package the antenna array, RF chip, power management chip and connector into a module, which reduces the distance between the RF IC and the antenna array. It is the preferred solution at the current stage after measuring performance, product volume and cost.

United States market for Millimeter Wave AiP Module is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
