A millimeter wave whole body scanner is a device that uses millimeter wave technology for whole body imaging. It generates a full-body image of the human body by emitting millimeter wave signals, then receiving and analyzing the reflections of the signals. Such scanners are commonly used in areas such as security inspections, medical diagnostics, and human imaging. Compared with traditional X-ray imaging, millimeter-wave whole-body scanners have lower radiation levels, have less impact on human health, can provide clearer and more detailed images, and can be used safely in more scenarios. This technology has broad application prospects in security inspection, medical treatment, human safety monitoring and other fields.

The global Millimeter Wave Whole Body Scanner market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
