The global Mine Automated Driving Solution market size is predicted to grow from US$ 1401 million in 2025 to US$ 2124 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Mine automated driving solution comprises the integrated hardware, software, sensors, and communications infrastructure that enable mining vehicles (haul trucks, loaders, drills, etc.) to operate autonomously or semi-autonomously — including navigation, obstacle detection, fleet coordination, remote operation, and autonomous dispatch — delivering improved safety, efficiency, and continuous 24/7 operation in open-pit and underground mining environments.

The mine automated driving solution industry chain begins upstream with sensor, GNSS/RTK, radar/LiDAR, camera, communication module, rugged computing hardware and fleet-management software developers, continues midstream through system integrators and OEMs who embed autonomy kits into new or existing mining vehicles, assemble ruggedized control centers, validate safety and reliability under harsh mine environments, and package fleet-management, remote-operation and scheduling software, and ends downstream with mining companies, contract mining firms, maintenance providers and logistics operators who deploy autonomous trucks, loaders, drills and support vehicles, integrate them into mine-wide traffic, dispatch and scheduling systems, and use them to optimize ore transport, excavation, drilling, logistics and maintenance across open-pit or underground sites globally.

Current and planned projects include large-scale autonomous fleet rollouts at major mining sites in Australia, Canada, Chile, South Africa and Mongolia, retrofit conversion programs replacing diesel driver-operated haul trucks with OEM-integrated autonomous

drive trucks in mature mines, deployment of underground remote-operation and automation packages in deep-pit coal and metal mines, investments by OEMs and integrators to build new heavy loaders and drills with factory-installed autonomy, public-private “smart-mine” upgrade initiatives in government-owned mines in Southeast Asia and South America, technology-upgrade projects to add LiDAR, radar and 5G communication to older fleets, and development of integrated fleet-management and predictive-maintenance platforms to expand high-load transport, drilling and logistics automation globally.
