The global Mine Compressed Air and Water Supply Self-Rescue Device market size is predicted to grow from US\$ 14.29 million in 2025 to US\$ 25.13 million in 2032; it is expected to grow at a CAGR of 8.4% from 2026 to 2032.

Mine Compressed Air and Water Supply Self-Rescue Device

The mine compressed air and water supply self-rescue device is a stationary, integrated life-saving unit installed near excavation faces, along escape routes, at personnel gathering points, and near emergency refuge facilities in coal mines or underground metal and non-metal mines. Connected to both the mine's compressed air and emergency water supply networks, the device utilizes pressure reduction, oil-water separation, air filtration, noise suppression, water purification, and multi-way distribution to simultaneously provide breathable fresh air and emergency drinking water to personnel seeking refuge during incidents such as gas outbursts, exposure to fire smoke or toxic/hazardous gases, ventilation failure, or entrapment. The product consists of a stainless steel or powder-coated steel enclosure, inlet shut-off valves (for air and water), air pressure reducing valves, oil-water separators, air filters, pressure gauges, silencers, water purification cartridges or ultrafiltration modules, breathing masks, drinking water hoses, and distribution manifolds. It is primarily deployed at coal mining faces, tunneling faces, blind headings, shaft-bottom stations, transport and return-air roadways, pump rooms, substations, blasting evacuation assembly points, and permanent or temporary refuge chambers; it serves both to provide short-term respiratory and hydration support during the initial stages of a disaster and as a continuous life-support node while awaiting rescue. The upstream supply chain includes stainless steel and carbon steel plates, copper and brass valve components, pressure reducing valves, pressure gauges, oil-water separators, air filter elements, PP cotton,

activated carbon, ultrafiltration membranes, silicone masks, food-grade drinking water hoses, seals, and fasteners. The midstream sector encompasses enclosure sheet metal welding, air and water circuit design, assembly of valve groups and filtration components, commissioning of air supply pressure and flow, testing of water supply pressure and quality, airtightness and watertightness testing, and acquisition of mining safety certifications. Downstream customers include coal mines and underground metal mines.
