## Abstracts

The global Mineral Filled Modified Polypropylene market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Mineral Filled Modified Polypropylene (MFMPP) is a type of polypropylene (PP) plastic that is reinforced with mineral fillers to enhance its mechanical and thermal properties. The addition of minerals, such as talc, calcium carbonate, or glass fibers, improves the strength, stiffness, and heat resistance of polypropylene, making it suitable for a wide range of applications.

**Growing Demand in Automotive Industry:** The automotive industry is a significant consumer of MFMPP, where manufacturers seek lightweight materials with enhanced mechanical properties for applications such as interior components, under-the-hood parts, and structural components.

**Sustainability:** There is a growing trend in the industry towards sustainability, and MFMPP can be part of this trend due to its ability to reduce weight in applications, contributing to fuel efficiency in the automotive sector.

**Technological Advancements:** Ongoing research and development efforts are focused on improving the formulation of MFMPP to cater to specific industry needs, such as better heat resistance, flame retardancy, and chemical resistance.
