The global Mineral Flotation Collector market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Mineral flotation collector is a flotation agent that can change the hydrophobicity of the mineral surface and make the floating mineral particles adhere to the bubbles. It is one of the most important agents in the flotation process. It selectively adsorbs on the mineral surface and increases the hydrophobicity of the mineral surface, thereby enhancing the adhesion of mineral particles on the bubbles and improving the floatability of the mineral, ultimately achieving effective separation and recovery of the mineral.
