## Abstracts

The global Mineral Powder Dryer market size is predicted to grow from US\$ 1231 million in 2025 to US\$ 1837 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

In 2025, global sales of mineral powder dryers reached 18,500 units, with an average selling price of US\$68,000 per unit. Mineral powder dryers are thermal equipment used to dry ore powder, slag powder, and various industrial powders. They primarily achieve moisture evaporation through full contact between hot air and the material, thereby reducing the moisture content to meet subsequent storage, transportation, or processing requirements. The equipment typically employs a rotary drum or fluidized bed structure, consisting of a drum body, transmission system, heat source system, feeding and discharging devices, and dust removal system. It features large processing capacity, strong adaptability, stable operation, and high thermal efficiency, and is widely used in the metallurgical, building materials, cement, mining, and chemical industries. The industry's total capacity is approximately 26,000 units per year, with an average gross profit margin of approximately 23%.

Upstream raw materials mainly include carbon steel plates, stainless steel plates, heat-resistant alloys, speed reducers, motors, burners, and refractory materials. Downstream demand primarily comes from the cement and building materials industry, mining beneficiation and tailings treatment, the metallurgical industry, and chemical and other powder processing sectors. With the increasing demand for the resource utilization of industrial solid waste, the comprehensive utilization of slag powder and tailings, and the increasingly stringent energy conservation and environmental protection policies, mineral powder drying equipment is developing towards high thermal efficiency, low energy consumption and intelligent control, and has a continuously growing market

space and business opportunities in the fields of green building materials and resource recycling.
