The report requires updating with new data and is sent in 48 hours after order is placed.

In the process of mineral processing, most mineral processing products contain a lot of water.

For example, the concentrate of flotation plant contains about 4 ~ 5 times of the solid mass, and the concentrate obtained by gravity separation plant and magnetic separation plant also contains a lot of water. Therefore, it is necessary to dehydrate the concentrate products, otherwise the transportation of concentrate is very difficult, and the transportation cost will increase.
