## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

A dehumidifier is a household appliance used to reduce the humidity in a space. Generally, the use of dehumidifiers is mainly for health reasons. Humid air will promote the growth of mold and cause many health problems. The relative humidity in the air is preferably between 30% and 50%. [1] Too high humidity (85% or more) can make people uncomfortable, cause water vapor to condense, dry clothes less easily, and sleep erratically. In addition, high humidity attracts many insects, such as silverfish roe (Fungiidae), fleas and cockroaches.
