The global Mini LED Display for EV market size is predicted to grow from US\$ 935 million in 2025 to US\$ 2604 million in 2032; it is expected to grow at a CAGR of 15.9% from 2026 to 2032.

In 2025, global Automotive Mini LED Display production reached approximately 5525 Units, with an average global market price of around 173 USD per Unit.

Mini LED refers to small-sized LEDs, with a size between traditional LEDs and Micro LEDs, approximately 1/10 the size of traditional LEDs, typically ranging from 100-300µm. Automotive Mini LED displays are LCD screens that use Mini LEDs as backlight sources, meet the stringent automotive operating environment (automotive-grade), and are installed in the car cabin. They are primarily used in in-vehicle display scenarios such as instrument clusters, center consoles, passenger entertainment screens, AR-HUDs, and rear-seat displays.

Automotive Mini LED Display, with its core features of micron-level LED arrays and precise local dimming, precisely addresses industry pain points of traditional automotive displays, such as whitening under strong light, insufficient contrast, glare at night, poor reliability under high temperature and vibration environments, and the burn-in and short lifespan issues of OLED screens. Its combination of ultra-high brightness, million-level contrast ratio, wide color gamut, and automotive-grade durability not only meets the upgraded experience demands of multi-screen, high-definition, and immersive interaction in smart cockpits, but also aligns with the core requirements of low power consumption and long lifespan in new energy vehicles. Coupled with improved supply chain maturity and cost reduction, it is becoming a core technological force driving the upgrade of automotive displays from basic information display to safety, comfort, and

intelligent interaction. This is propelling the industry from competition based on single size and basic image quality to a comprehensive value competition based on all-scenario lighting effects and reliability. With technological iteration and continuous cost optimization, Automotive Mini LED Display will further penetrate mainstream vehicle models, becoming the mainstream choice for smart cockpit display upgrades and leading the automotive display industry into a new stage of development that is clearer, more reliable, and more intelligent.

The upstream raw materials for automotive Mini LED displays mainly include Mini LED backlight materials and LCD panel materials. Typical suppliers include Sanan Optoelectronics, Shenzhen MTC, Foshan NationStar Optoelectronics, Corning, AGC, Shenzhen Sunnypol, Shenzhen Sapo Photoelectric, Ningbo Shanshan, etc. The downstream applications are mainly with major OEMs, with typical users including Li Auto, NIO, XPeng, Geely, Xiaomi, etc.

The single-line production capacity of automotive Mini LED Display varies greatly depending on the technology path, production process and degree of automation. The industry gross profit margin is usually in the range of 40%-50%.
