The global Mini Vise market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A mini vise is the smallest type of vise. 'Vises' are tools used to hold workpieces in place during operations and are used in various machining operations. Mini vises are mainly used for manual processing and can be purchased at 100-yen stores. Vises themselves are made of a wide range of materials, from metal to resin, and each material has different holding power.

Mini vises are used to secure objects during processes such as sanding and cutting. Although not necessary if the work can be done by hand, they are indispensable when work cannot be performed by hand, such as when working with high-speed rotating equipment. Since the vise only holds the workpiece itself, it must be firmly attached to the worktable using screws or clamps during actual use. Mini vises are the smaller of the two and are mainly used for manual processing.

United States market for Mini Vise is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
