The global Miniature Integrated Molded Power Inductors market size is predicted to grow from US\$ 1701 million in 2025 to US\$ 3183 million in 2032; it is expected to grow at a CAGR of 9.5% from 2026 to 2032.

By 2024, global production of miniature integrated molded power inductors is 3.65 billion units, with an average selling price of US\$0.44 per unit. Miniature Integrated Molded power inductors are electronic components that combine traditional wound inductors with advanced production processes to form an inductor with higher performance and smaller size. Micro-molded power inductors are made by combining magnetic powder with coils and die-casting them in one go. This inductor is designed with SMD (surface mount technology), making it easier to install on circuit boards.

The market for miniature integrated molded power inductors is experiencing steady expansion, benefiting from the continued growth of diverse applications such as consumer electronics, new energy vehicles, and AI servers. Overall, the market demonstrates a high level of prosperity and technological advancement. In the global market, China has become the largest manufacturing and consumption center, holding a dominant position. Japan maintains a technological advantage in high-end and automotive-grade segments, while the United States and Europe are supported by industrial and military demand. Industry competition is highly concentrated, with a small number of international giants and emerging Chinese companies forming the main force. The top manufacturers collectively hold the majority of the market share. Regarding technological trends, product evolution is accelerating towards miniaturization, high frequency, and high current density. Molded inductors are gradually replacing traditional multilayer inductors, and their integration with power chips is increasing. The upstream supply chain comprises magnetic materials, copper wire,

and encapsulation resins. The midstream manufacturing process has high technical barriers, while downstream applications cover core devices such as mobile phones, automobiles, and servers. At the policy level, China continues to increase its investment in domestic substitution, new energy, and computing infrastructure. International standards are also driving improvements in product performance and reliability. Looking ahead, as the trends of AI and electrification deepen, the market is expected to continue to expand, the technological threshold and application depth will increase simultaneously, and the global voice of Chinese companies will be further enhanced.
