Mining drills are equipment that are utilized to drill earth surface for mining operation. Breakers are used to break or demolish stones or rock for mining. Mining drills include rotary drills, blast-hole drills, and percussive drills. The different types of breakers include mobile and stationary hydraulic breakers and other rock breakers. The drills are primarily used to drill holes in the earth surface to place the explosive for blasting. The drills consist of mast, rod changer, rotary head, air compressor, drill pipes, and dust ducting. Breakers consist of side rods, chambers, main valve, piston, and front cap. These breakers are employed in mining applications such as trenching, rock demolition, and quarrying.
