The global Mining Infrastructure Maintenance Service market size is predicted to grow from US\$ 2886 million in 2025 to US\$ 4955 million in 2032; it is expected to grow at a CAGR of 8.0% from 2026 to 2032.

The mining infrastructure maintenance service industry is undergoing a profound transformation from traditional reactive maintenance to predictive and intelligent maintenance. Currently, the core market trend is the deep integration of IoT, digital twins, and AI technologies to achieve real-time status monitoring and fault early warning for critical facilities such as crushers, conveyor belts, and mine hoists. Service models are gradually shifting from single-equipment repair to full lifecycle management encompassing design, operation, and overhaul. Simultaneously, facing the dual challenges of aging facilities in older mines and the high efficiency and safety standards required for new projects, the industry is experiencing a surge in demand for multi-skilled technical personnel with data analysis capabilities, and service providers are accelerating the provision of customized, remote, integrated solutions to mining companies.
