The global Mining Power Supply market size is predicted to grow from US\$ 1210 million in 2025 to US\$ 1908 million in 2032; it is expected to grow at a CAGR of 6.9% from 2026 to 2032.

Mining power supplies are devices specifically designed to provide stable and safe power to mining equipment and systems. They typically feature explosion-proof, dust-proof, and moisture-proof designs to adapt to the complex environments of coal, metal, and non-metal mines. Their core functions include providing reliable power to coal mining machines, tunneling machines, ventilation systems, mining transportation equipment, and underground communication and control systems, while also incorporating safety features such as overload protection, short-circuit protection, and remote monitoring.

In terms of product types, mining power supplies mainly include mining switching power supplies, mining rectifier power supplies, mining UPS power supplies, mining frequency converter power supplies, and emergency power supplies, meeting the power, voltage, and protection level requirements of different mining equipment. Based on power rating and application scenario, mining power supplies can be divided into low-power, medium-power, and high-power series, and are available in fixed, mobile, and vehicle-mounted installation forms, covering different working conditions in underground and open-pit mining.

The mining power supply market has shown a steady growth trend in recent years, driven by the automation and electrification upgrades in mines and the improvement of safety supervision. With increasing demand from coal, metal, and new energy mining, explosion-proof power supplies, intelligent power supply systems, and remotely

monitored mining power supplies have become growth highlights, particularly concentrated in the Asia-Pacific region.
