The global Mining Rig Rental Services market size is predicted to grow from US\$ 3913 million in 2025 to US\$ 7959 million in 2032; it is expected to grow at a CAGR of 10.4% from 2026 to 2032.

Mining Rig Rental Services refer to a specialized cloud-based commercial model where users pay to utilize the computational power (hash rate) of remote hardware dedicated to cryptocurrency mining. Unlike traditional cloud mining, which often simplifies the process into a fixed-income investment, rig rentals typically offer a more granular level of control. Users can lease specific hardware units?either individually or as part of a collective pool?and direct that power toward a mining pool of their choice.

This service acts as a bridge between rig owners, who have excess hardware and cheap electricity, and renters, who want to mine specific coins without the logistical burdens of hardware maintenance, cooling, and noise management. The rental price is usually determined by the market demand for a specific algorithm (e.g., SHA-256, Ethash, or Scrypt) and the duration of the lease.
