A mining screener is a tool or software used by investors and traders to filter and screen mining stocks based on specific criteria. It helps them identify potential investment opportunities in the mining sector by narrowing down the list of stocks to those that meet their requirements.

The mining screener allows users to set various parameters such as market capitalization, sector, country, commodity type, financial ratios, and technical indicators. It then scans the market and presents a list of mining stocks that match the specified criteria.

By using a mining screener, investors can save time and effort in manually researching and analyzing individual mining stocks. It provides them with a more efficient way to identify stocks that fit their investment strategy and objectives.

Some mining screeners also provide additional features such as charting tools, news and analysis, and portfolio management capabilities. These features can further assist investors in making informed decisions about their mining investments.
