## Abstracts

The global Mining Single Hydraulic Props market size is predicted to grow from US$ 120 million in 2025 to US$ 158 million in 2032; it is expected to grow at a CAGR of 4.1% from 2026 to 2032.

A mining single hydraulic prop is a key support device used in underground coal mine working faces. It provides constant resistance support using hydraulic principles. This equipment is mainly used for roof support in ordinary mechanized coal mining faces, and can also be used for end or temporary support in fully mechanized mining faces. It needs to be used in conjunction with support components such as metal articulated roof beams.

The upstream sector comprises metal raw materials and seals/valves, springs, and rubber components. Downstream demand is entirely dependent on the coal industry, with applications in coal mine face support for conventional and blasting mining faces, as well as end and advance support for fully mechanized mining faces.Global sales in 2024 were approximately 1.07 million units, with an average market price of approximately US$110 per unit. Single-line production capacity varies due to differences in manufacturing processes and investment scale, with industry gross profit margins ranging from 20% to 35%.

United States market for Mining Single Hydraulic Props is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
