## Abstracts

The global Mining Stench Gas Emergency Alert System market size is predicted to grow from US\$ 707 million in 2025 to US\$ 995 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

The Mining Stench Gas Emergency Alert System is a safety warning system specifically designed for underground mining environments. It transmits emergency evacuation signals rapidly and throughout the entire mine area by releasing strongly odorous gases (such as methanethiol and ethanethiol). The system typically consists of a gas release device, control unit, sensors, communication module, and backup power supply, maintaining high reliability even in extreme conditions such as power outages and communication interruptions. In enclosed spaces like mines, traditional audible and visual alarm systems may fail due to high noise levels, low visibility, or power outages. However, odorous gases offer advantages such as strong penetrating power, easy identification, and no reliance on visual or electrical signals, enabling rapid evacuation of personnel in emergencies and significantly enhancing mine safety. The average price of this product is approximately US\$1800 per unit, with global sales of approximately 400,000 units.

United States market for Mining Stench Gas Emergency Alert System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
