Mining truck electric drive system refers to the electric drive system used in mining trucks, which drives the wheels through electric motors to drive the truck. Compared with the traditional mechanical transmission system, the electric drive system has the following advantages:

**Higher efficiency:** The electric drive system does not require a mechanical transmission

device and can directly convert electrical energy into mechanical energy, so it is more efficient.

**Lower maintenance costs:** Traditional mechanical transmission systems require regular maintenance and parts replacement, while electric drive systems have lower maintenance costs.

**More environmentally friendly:** The electric drive system does not produce pollutants such as exhaust gas and waste water, so it is more environmentally friendly.

**Quieter:** Electric motors run quieter than internal combustion engines.

This kind of electric drive system is widely used in mines, ports and other occasions, and has become one of the mainstream development directions of future mining trucks.
