The global Mining Truck Engine market size is predicted to grow from US\$ 2127 million in 2025 to US\$ 2861 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

Mining truck engines are high-power industrial power units specifically designed to power transport vehicles in open-pit or underground mines (such as rigid mining dump trucks and articulated mining trucks). They are typically large-displacement turbocharged diesel engines, capable of high torque output, long-term continuous operation, and adaptability to extreme conditions such as high temperatures, high dust levels, and high loads. These engines often employ a V-type multi-cylinder structure and a high-pressure common rail fuel system, and are frequently combined with diesel-electric drive systems to drive generators or directly drive vehicles. They are the core power source for achieving efficient heavy-duty operations in mining transport equipment. In 2025, sales were approximately 9,679 units. The price of mining truck engines generally exhibits a significant stratification based on power and application level: small and medium power models (approximately 500?1000 hp) are mostly used in articulated mining trucks, with prices typically ranging from \$80,000 to \$200,000; medium and high power models (1000?2500 hp) for mainstream rigid mining trucks are priced at approximately \$200,000 to \$600,000; while high-power engines (over 3000 hp) used in ultra-large mining trucks weighing over 200 tons often reach \$600,000 to \$1,000,000 or even higher.

United States market for Mining Truck Engine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Mining Truck Engine is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
