Peppermint is a hybrid species of spearmint and water mint (*Mentha aquatica*). The essential oils are gathered by CO₂ or cold extraction of the fresh aerial parts of the flowering plant. The most active ingredients include menthol (50–60 percent) and menthone (10–30 percent). Today, peppermint oil is recommended for its anti-nausea benefits and soothing effects on the gastric lining and colon. It's also valued for its cooling effects and helps to relieve sore muscles when used topically. In addition to this, peppermint essential oil displays antimicrobial properties, which is why it can be used to fight infections and even freshen your breath.
