Classified as a third-generation calcium channel modulator, this drug boasts steady analgesic efficacy, favorable tolerability and a low incidence of adverse reactions compared with conventional analgesics. It is better suited to the long-term treatment needs of patients with chronic neuralgia and has gained wide recognition in clinical practice.

From the perspective of market demand, the high prevalence of underlying diseases has resulted in a sustained patient population with related painful conditions. The

growing clinical demand for safe and innovative analgesic drugs has laid a solid foundation for the market development of this product.

At present, the market is dominated by the original branded drug, while multiple pharmaceutical enterprises have launched the research and development of generic versions, forming a competitive landscape led by the original drug with generics in active pursuit.

Supported by medical insurance policies, improved clinical accessibility and the gradual launch of generic drugs, its market coverage will be further expanded. Meanwhile, the product will face intensified market competition.
