The global Mirrorless Camera and DSLR Camera market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

A mirrorless camera is a type of digital camera that does not have a mirror inside the camera body. Instead, they use electronic viewfinders or a screen on the back of the camera to display what the image sensor is capturing. This allows for a more compact and lightweight camera body, making it easier to carry and travel with. Mirrorless cameras are typically known for their high-quality image sensors, fast autofocus, and interchangeable lenses, making them a popular choice for professional photographers and hobbyists alike. Some popular mirrorless camera brands include Sony, Fujifilm, and Panasonic.

A DSLR (Digital Single Lens Reflex) camera is a type of camera that uses a mirror and prism system to reflect the image seen through the viewfinder to the camera's image sensor and capture a digital image. DSLR cameras are known for their ability to produce high-quality images with sharp focus, depth of field control, and low light performance. They offer interchangeable lenses, manual controls for aperture, shutter speed, and ISO, and the ability to shoot in RAW format, allowing for greater flexibility and control in post-processing. DSLRs are used by professional photographers, as well as hobbyists and enthusiasts looking to take their photography to the next level.
