The global Mist Cooling Fan market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Mist/fog cooling fans are cooling devices that release mist generated by ultrasonic waves or other means, combined with airflow from a blower. By utilizing the heat of vaporization principle, where heat is absorbed as water evaporates, these fans can lower the temperature by 37 to 41 °F below ambient temperature.

They are suitable for those preferring mild cooling effects over the strong cooling of air conditioners, offering a balance of coolness and humidity. These fans are versatile, providing humidification in winter and cooling in summer.

Portable and tabletop mist/fog cooling fans are popular for personal use during outdoor activities, such as watching sports or walking, or as desk cooling fans in the office or kitchen. Stationary mist/fog cooling fans often supplement air conditioning or traditional fans and are equipped with various functions. In commercial settings, mobile misting fans, attached to large fans, are used in spacious areas like factories, construction sites, and outdoor events. Some powerful models deliver cool air up to 30 meters away.
