Misting Systems are one of the most effective and efficient methods available for cooling open outdoor areas such as patios or large indoor areas such as warehouses. They are also used for: dust suppression, order control, special effects, and several other residential and commercial applications.

When people refer to misting, they are referring to a mist line system. These systems deliver water under low, medium, or high pressure to special nozzles that atomize the water into very small particles. The higher the pressure (up to 1000 psi) the smaller the particle size, which in turn means better evaporation and cooling. These systems can also be used in conjunction with fans to add to the cooling effect of any residential or commercial mist install.

There are low pressure DIY mist kits that you can just hook up to your water faucet and be misting your patio in minutes. High pressure spray systems are commonly used in commercial and industrial applications. These use pumps to increase the pressure to 1000 PSI. This atomizes the mist particles to 5 microns, allowing the mist to evaporate more quickly, resulting in better cooling and dust removal in any climate.

Global Misting Systems key players include H.IKEUCHI&CO.,LTD., Cloudburst Misting Systems, Inc., MistAmerica, Orbit Irrigation, Aero Mist, Mist Cooling, Inc., Universal Fog

Systems, Inc., Shenzhen Raychow EPC Technology, etc. Global top eight manufacturers hold a share about 5%.
