Mixed Bed Resins are a mixture of cation and anion exchange resins. These heterogeneous resins are used as polishers to obtain high purity water, which is required for boiler feed for high-pressure boilers, electronics and electrical discharge cutting machines, glass window washing and pharmaceutical applications. Mixed Bed Resins can be supplied in highly regenerated, premixed conditions for use in dye applications. They are also available as highly regenerated cation and anions for use in re-regenerable mixed bed units. Premixed resins are available in different proportions and combinations of cation and anions to suit end-user needs.
