Abstracts

The global Mixed Metal Oxide (MMO) Electrode market size is predicted to grow from US$ 1123 million in 2025 to US$ 1612 million in 2032; it is expected to grow at a CAGR of 5.4% from 2026 to 2032.

In 2025, global MMO electrode production reached approximately 238.5 k Sqm, with an average global market price of around US$4814 per Sqm. Mixed metal oxide (MMO) electrodes, also called Dimensionally Stable Anodes (DSA), are devices with high conductivity and corrosion resistance for use as anodes in electrolysis. They are made by coating a substrate, such as pure titanium plate or expanded mesh, with several kinds of metal oxides. One oxide is usually RuO2, IrO2, or PtO2, which conducts electricity and catalyzes the desired reaction such as the production of chlorine gas. The other metal oxide is typically titanium dioxide which does not conduct or catalyze the reaction, but is cheaper and prevents corrosion of the interior.

The global market for Mixed Metal Oxide (MMO) electrodes is evolving from traditional applications in chlor-alkali, electroplating, and hydrometallurgy into emerging fields like water electrolysis for green hydrogen, fuel cells, and CO? conversion. Major electrochemical companies, such as De Nora, have installed over 50,000 DSA anodes worldwide, demonstrating established market penetration. Current development trends focus on creating catalytic coatings for alkaline and PEM water electrolysis to produce green hydrogen, alongside advanced oxidation electrodes for water treatment. Growth opportunities are driven by the global energy transition and circular economy policies, increasing demand for MMO electrodes in green hydrogen production, precious metal recovery, and wastewater purification. However, significant barriers remain: the reliance on expensive and supply?chain?critical precious metals like iridium and ruthenium; technical challenges regarding coating durability under harsh operating conditions; and

competition from alternative materials such as non?precious metal catalysts and carbon?based electrodes.
